

GLOBALG.A.P.

GLOBALG.A.P. certifications are some of the most internationally recognized and required food safety standards in the world. These Global Food Safety Institute (GFSI) benchmarked certifications can save you time and money by eliminating audit duplications and providing consistent processes around the world.

NSF Canada Agricultural Certification Company can help you kick-start the process. NSF Canada Ag is accredited by ANSI to certify producers to GlobalG.A.P, a Global Food Safety Initiative (GFSI)-benchmarked food safety program. Our emphasis on auditor calibration, technical consistency and integrity means you can trust our the quality and accuracy of our audit reports.

There's a GLOBALG.A.P. solution to fit every type of business, from the small local farms to big international operations.

GLOBALG.A.P. SERVICES

- > GLOBALG.A.P. Integrated Farm Assurance Certification
- > GLOBALG.A.P. Produce Safety Standard Certification
- > GLOBALG.A.P. Harmonized Produce Safety Standard for U.S.A.
- > LOCALG.A.P. Primary Farm Assurance Assessment.

GLOBALG.A.P. Integrated Farm Assurance Certification (IFA)

The most widely implemented and accepted food safety standard in the world, GLOBALG.A.P. Integrated Farm Assurance (GLOBALG.A.P. IFA) certification improves farm management practices and is in compliance with legislation on key issues such as food safety, traceability, environmental sustainability, worker health and safety, and animal welfare. GLOBALG.A.P. IFA is the most rigorous and comprehensive certification producers can currently attain. Implemented on over 100,000 farms in more than 100 countries, this certification is well known, proven and practical to adopt.

GLOBALG.A.P. Produce Safety Standard Certification and Harmonized Produce Safety Standard

The GLOBALG.A.P. Produce Safety Standard (PSS) certification is the ideal certification for producers supplying U.S. and Canadian customers and who are mainly concerned with food safety for fruits and vegetables. This GFSI-benchmarked certification can be combined with Tomato Metrics and is aligned with the United Fresh Harmonized Standard. Fruits and vegetables covered by the GLOBALG.A.P. product list and used for fresh, cooked or processed consumption by humans can apply for PSS certification. Producers must comply with the complete PSS checklist in order to receive PSS certification. After producers have achieved PSS certification, they can take additional steps to upgrade to full GLOBALG.A.P. IFA certification. Harmonized Produce Safety Standard is the combination of the Produce GAPs Harmonized Standards "Field Operations and Harvesting" (pre-farmgate) and "Post-Harvest Operations" (post-farmgate) checklists in one combined document Plus 14 additional control points required for GFSI recognition.

The Harmonized Produce Safety HPSS certified producers can take additional steps to achieve the comprehensive IFA certification over time. HPSS has been submitted for GFSI benchmarking. Once it has successfully achieved GFSI benchmarking, HPSS will replace PSS. HPSS may be used by producers in North, Central and South America, selling to those buyers requesting this certification, especially in North America. Standard's GFSI recognition is pending.

LOCALG.A.P. Primary Farm Assurance Assessment

Ideal for small growers new to the food safety process, this entry-level standard for fruit and vegetable producers assesses fundamental food safety for the North America and Latin America markets. This assessment is aligned with the United Fresh Harmonized Standards. We offer two levels of this certification: Foundation Level and Intermediate Level. After producers have achieved PFA certification, they can take additional steps to upgrade to GLOBALG.A.P. IFA certification.
